OXYZYME
LAUNDRY DETERGENT

This product is a high quality laundry detergent specially compounded with colour-safe oxygen bleach and enzyme stain removers to provide excellent soil removal and brilliant whites and colours. This is a "one shot" product of medium alkalinity and does not require the use of a sour-neutralizer. The low water temperature requirement of 48°C (120°F) reduces the amounts of energy used and provides additional cost savings.
This product is ideal for commercial shirt laundries and requires little or no pre-treatment of collars or cuffs. For particularly stubborn stains, use it as a presoak.

DIRECTIONS: For top loading domestic type washers, add 1/2 to 3/4 cups per load. More may be required for heavy soil conditions. This product is also ideally suited for high-efficiency domestic washers at a reduced amount.

For use in commercial machines, add 4 to 6 oz detergent for each 50 lbs of dry fabric. This product may be used with any water temperature up to 63°C (145°F).
